# Report facts

umlaut tested and measured the performance of fixed broadband services in Ireland. Focusing on the real user experience, we tested the categories Geo Availability, Download Speed, Upload Speed, Latency and Stability.

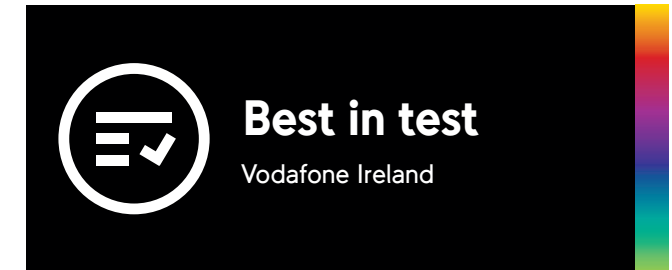

For this report crowdsourced performance data has been collected and evaluated in 24 weeks from CW36 2025 until CW07 2026. We collected over 41 million samples from 89,539 lines.

# Methodology

As the de-facto industry standard, umlaut's benchmarking methodology focuses on customer-perceived network quality and covers a wide range of mobile and fixed broadband services.

For the collection of crowd-data used for this certification report, we have integrated a background diagnosis processes into thousands of diverse Android apps. If one of these applications is installed on the end-user's phone, data collection takes place 24/7, 365 days a year. We focus on the user experience. Our data collection is compliant with the GDPR, since we do not include any personal user data. This unique crowdsourcing technology allows us to collect data about real-world experience wherever and whenever customers use their smartphones to consume data services or place phone calls.

The umlaut benchmarking framework is based on a unified measurement method for true international comparability combined with the umlaut-Score approach. Our top priority is to fairly and transparently assess the global development of networks, push their quality and performance with our benchmarks and ultimately achieve improvements for every customer.
