

Modernize security operations. Respond at the speed of threat.

MxDR powered by Google SecOps

Google SecOps provides the AI-powered platform. Accenture brings the strategy, migration, implementation and 24x7 operations to turn technology into stronger cyber resilience.

Do you face these barriers to stronger security operations?

- Alert fatigue and low-fidelity noise
- High log-ingestion and operating costs
- Slow detection, investigation and response
- Fragmented telemetry and limited visibility

Reimagine the SOC as an intelligence-driven operating model

Move from reactive, tool-heavy operations to a unified model built for speed, automation and continuous improvement.

FASTER RESPONSE

Automate investigation and response workflows.

LOWER BURDEN

Reduce repetitive work and engineering effort.

CENTRAL VISIBILITY

Unify telemetry across complex environments.

CYBER RESILIENCE

Continuously hunt, tune and improve.

What can MxDR powered by Google SecOps do for you?

Modern platform capabilities, operated by Accenture at enterprise scale.

A unified AI-powered foundation for detection, investigation and response

SIEM + SOAR

Unify search, investigation, case management and automated response.

UDM + analytics

Normalize telemetry into a common model for rapid analysis at scale.

Threat intelligence

Apply Google and Mandiant intelligence with curated detections.

Gemini + automation

Accelerate investigation, summaries, playbook creation and analyst workflows.

Accenture turns the platform into an operating capability

STRATEGY

SOC assessment, modernization strategy and roadmap.

MIGRATE

Architecture, data onboarding, detections and playbook conversion.

BUILD

Implementation, integration and industry content activation.

RUN

24x7 monitoring, triage, response and continuous threat hunting.

Platform + people + proven operations

Integrated capabilities that scale without requiring clients to build everything internally.

Why Accenture + Google Cloud?

Proven experience, certified talent and a practical path to value.

Accenture + Google together, by the numbers

● **250+**

Google SecOps
engagements

● **450+**

Google SecOps-certified
engineers

● **1,000+**

Google Security
certifications

● **32K+**

cybersecurity
professionals

● **54**

Security Centers

● **24**

countries supporting
delivery

Powering stronger security outcomes

● **Faster detection and response**

Automation and expert-led operations
accelerate investigation and action.

● **Reduced operational burden**

Lower repetitive work, tool friction and legacy
engineering effort.

● **Improved cyber resilience**

Continuous monitoring, threat hunting and
optimization strengthen readiness.

● **AI-augmented operations**

Gemini and Accenture operational AI support
the incident lifecycle.

Choose the right place to start

01

Executive security review

Align on current challenges, visibility
gaps and business priorities.

02

Google SecOps demo or PoC

Validate prioritized log sources,
detections, integrations and a SOAR
playbook.

03

MxDR evaluation

Define the coverage model and
roadmap for continuous operations.

**Start a conversation about your security
operations priorities.**
