

ACCELERATE YOUR T+1 JOURNEY WITH CUTTING-EDGE TECHNOLOGY

VIDEO TRANSCRIPT

The clock for Accelerated settlement in North America's capital markets is ticking fast. Will you be ready for t+1 settlements by May 2024?

Some organizations are using this change as an opportunity to get even further ahead by factoring in real-time settlement considerations as they prepare for T+1. In fact, 41% of capital markets executives in a recent Accenture survey identified technology as the key driver of the T+1 transition.

If your firm has not yet begun its T+1 journey or feels it needs to accelerate its transformation, this is where Accenture can help. We've worked for years with firms across the buy and sell side to help modernize operations including the move to T+2 and increase straight through processing rates.

We began running transaction processing for clients in 2013, and now cover a diverse range of asset classes which provides us with valuable first-hand experience in this field. Today our solution offers settlement in over 70 markets and processes on average over 2.5 million transactions each day. As part of our transaction processing service we've developed a wealth of proprietary and third-party artificial intelligence and machine learning tools that could help you transition to T+1. By leveraging big data analytics we can help firms quickly identify where they can optimize processes throughout the trade life cycle and customize their path to T+1. And we can extend our capabilities through a broad set of ecosystem partners to help accelerate your T+1 journey further.

Together, we can help you become agile and dynamic with real-time data and insightful analytics. Accenture has the experience to both help ease the transition to T+1 one and keep you on track for the continuous transformations you'll need to stay ahead.

Are you ready to put your data to work?
