

GET TO KNOW OUR PEOPLE: MEET EOGHAN

[Music]

00:07
so my name is Eoghan Maloney and I'm a
00:09
senior manager at Accenture I joined
00:11
Accenture back in 2010 into their
00:13
consulting practice and I'm currently
00:15
the cloud capability lead for a
00:16
technology strategy and advisory team
00:19
in that role I work within the cloud
00:21
first team in delivering cloud solutions
00:24
for our clients
00:25
we work with engineers architects and
00:27
delivery to bring the end-to-end journey
00:29
to life in the cloud for for those
00:32
businesses that need it
00:34
we could do anything from business case
00:36
for cloud right the way through to
00:37
full-scale cloud migration prior to
00:40
joining Accenture I worked in the

00:41
construction engineering sector I
00:42
graduated with a master's in engineering
00:45
before moving to technology that really
00:48
gave me a solid foundation in critical
00:49
thinking and problem solving which I'm
00:51
able to apply in my role on a day-to-day
00:52
basis Accenture really prides itself in
00:55
taking people from different backgrounds
00:57
working together in one team to deliver
00:58
value for our clients
01:00
what appealed to me about a career
01:01
Accenture was the responsibility that
01:03
you're given Accenture trusts you to go
01:05
in and deliver large complex projects
01:08
with our clients
01:09
in doing so they build you up with the
01:11
skills and knowledge that you need to

GET TO KNOW OUR PEOPLE: MEET EOGHAN

01:12
deliver on the job
01:14
also the variety of work that you get
01:17
means you could be going in delivering
01:18
with different teams different
01:20
technologies different clients on a
01:21
day-to-day basis and that breadth of
01:24
experience is really something that
01:25
appealed to me
01:27
what excites me about a career in cloud
01:28
computing is working with those
01:30
companies that are so heavily investing
01:32
in technology and innovation and
01:34
bringing those solutions that really
01:35
help the world around us that gives me
01:38
the opportunity to work with all these
01:39
new technologies that are being
01:40
introduced by the cloud providers

01:43
really working with our clients to
01:45
identify solutions to the problems that
01:47
they have and bring to bear the power of
01:49
the cloud a standout moment for me in my
01:51
career at Accenture was probably one of
01:53
the first cloud deliveries I did
01:56
we started out by identifying the
01:58
requirements from the customer
02:00
we realized that cloud was was the best
02:02
solution for them at the time
02:04
when we eventually implemented the
02:06
solution the realization from the
02:08
customer of how it had simplified
02:10
their business processes was something
02:12
that really opened my eyes to the power
02:14
that cloud has and the value it can
02:16
bring to that client

GET TO KNOW OUR GRADUATES: MEET EOGHAN

02:17

so my advice for someone starting out a

02:19

career in cloud computing or consultancy

02:21

is to have a look at the training and

02:23

courses that are available for them a

02:25

background in development and technology

02:26

is not critical so if you do your

02:28

research identify the course that's

02:30

right for you you can really get a head

02:31

start on your career

02:39

you
