

EMBRAER

VIDEO TRANSCRIPT

At Embraer, we challenge ourselves to go beyond expectations to deliver the ultimate customer experience.

What happens when you combine the fastest and longest-range single pilot jet with comprehensive air ambulance solutions? You get Embraer's Phenom 300MED, a unique MedEvac solution to deliver lifesaving transportation when it's needed most.

Designing this aircraft began with our best-selling light jet for the past 10 years, the Phenom 300E.

It is well suited for MedEvac solutions due to its high payload capabilities, best in class cabin altitude, essential for patient care, and shorter flight times, due to its ability to receive up to Mach .80.

And because of the wide forward entrance door, the largest in its class, medical professionals will find it much easier to load patients on stretchers into the cabin.

Designed in partnership with umlaut and Aerolite, the latest medical technology including state-of-the-art ambulance equipment can be seamlessly installed within the flexible cabin space, and numerous configurations are available to meet customers' needs.

Equally impressive, this hospital grade E carrier can be reconfigured into a passenger cabin without the need for special tools in less than six hours.

Given this flexibility, the Phenom 300MED is available as a retrofit for current Phenom 300 series operators.

This aircraft offers the highest residual value in the industry, low mission cost and a high dispatch rate due to its top reliability.

These attributes create one of the most efficient MedEvac solutions for airport-to-airport transportation.

And with Embraer's far-reaching services and support, MedEvac operators will enjoy peace of mind, knowing that our top-ranked customer support network is there to help them wherever their mission takes them.

When seconds count, you can count on the Phenom 300MED to deliver critical care and transportation when patients need it most.
