High performance. Delivered.

NBN Co

Video Transcript

Imagine a doctor consulting with a patient 1000 kilometers away and monitoring critical wellness data online at the same time.

Picture a teacher who can provide expert instruction for students no matter their location or background, delivering equal opportunity in learning.

Think about living 15000 kilometers from the seaboard in a small town and being able to have the same fast broadband services for work or entertainment as others around Australia. The Australian

government has a vision to achieve all this and NBN Co is making it happen. And we at Accenture are supporting this groundbreaking transformation.

Since day 1, we've been working with NBN Co to hire highly skilled employees. Not only have we supported NBN Co to recruit over 2500 staff. We've help to create HR services to onboard NBN Co's new joiners, train them, pay them as well as manage their performance. In recognition about collaboration, our 2 organisations were jointly recognised by the HROA in 2013.

NBN Co had to set up business operations quickly. We helped established their corporate IT systems and we continue supporting several Enterprise-wide applications including Financial Management, Supply Chain, Project Management, Human Resources and Analytical Reporting. We collaborated to establish their IT platform for the design and management of the Physical Network and now support their WorkForce Management Solutions. Once the foundation was established, it was full steam ahead or in reality, light speed ahead with designing, building and operating the network.

NBN Co piloted the construction of network in Tasmania, households on that small island would have first received fiber to their premise, the fastest network Australia has ever seen.

When early design throughput is slower than desired, we assisted NBN Co in its rework to improve network design processes, the result; faster design-to-construct cycles to get broadband service to market. Our collaboration with construction continues as we help NBN Co manage the delivery of fiber to single dwelling units or homes, multi dwelling units or apartment blocks and complex premises to achieve targets.

The National Broadband Network will have a profound effect on the way Australian's work, play, learn and receive healthcare. And it will affect our clients as well. For example, in the health industry, we have a project called Serving Older Australians which is a telehealth pilot that relies on the NBN, this is funded by the Department of Health and being conducted in conjunction with a number of leading aged care providers and their national bodies.

And we have clients in the resources industry, an integral part of Australian's economy. Some of their mining sites have internet access only on a sunny day, imagine what continuous high speed broadband will do for them.

As the NBN Co continues to fulfil the government's vision of delivering a national broadband network to all Australian premises,

Accenture will continue to bring new ideas for performance improvement and innovative ways to leverage technology. Accenture is committed to helping enable the NBN Co to lead a significant improvement in broadband service quality, making Australia greater than it ever been before and revolutionising the way we work, live, grow and compete.
