# WOMEN AT ACCENTURE

VIDEO TRANSCRIPT

**RAYNA AHMAD**

**Analyst**

**Rayna:** Hi, I'm Rayna, and I'm a make-up enthusiast, music lover, and a cinephile.

I work with Accenture ASEAN Technology. I am responsible for implementing business solutions in SAP, based on the functional and technical requirements.

These include understanding the current process, designing and configuring the new process flow, and explaining the external know-how for the client. We help organizations manage their businesses more efficiently, allowing them to stay ahead of the competition.

Outside of work, I love to do makeovers for my friends, for my clients or for myself. I also love experimenting with new beauty products and writing reviews on my personal blog.

### ***When and why did you join Accenture?***

**Rayna:** I joined Accenture in February 2017, right after I graduated from Universitas Indonesia. What attracted me to Accenture was the company's core values and its collaborative and supportive environment.

I love working in Accenture because of its culture. We have a fun and dynamic working atmosphere. We are open to one another; and our team leader is very supportive.

On top of that, Accenture provides us a platform to have continuous learning and valuable global connection.

### ***Why did you choose a career in STEM?***

**Rayna:** I chose a career in STEM because I want to be able to go and offer a new and fresh perspective. Arguably, this is a male-dominated area. I believe the more diverse a sector is, the better and more likely it will flourish.

Aside from that, I want to share with other women out there to not second-guess themselves. If you want to pursue a STEM career, go for it!

I am thankful that Accenture supports me and my desire to grow. I am in a workplace that is dynamic and challenging; a workplace that values me; and a workplace that allows me to make a difference.
