Accenture Cloud Solutions for Oracle

Accelerating digital transformation with cloud solutions

High performance. Delivered.

Accenture Cloud Solutions for Oracle: Accelerate your digital journey

Cloud technologies can be a critical move to support your business's need to innovate, go to market faster, modernize systems and trim costs. But it may not be easy to navigate the process. The decisions may be more complex than simply choosing a public or private cloud.

Accenture Cloud Solutions for Oracle can help you take advantage of our experience with Oracle's extensive suite of advanced business solutions, leveraging the power of cloud technology to respond to changing market conditions and help accelerate the growth of your digital business.

We help deliver business value while simplifying Oracle application environments, so you can be more agile in responding to business needs and providing a return on investment. Potential benefits are as follows:

- Accelerated application development
- Reduced need for custom applications
- Simplified and streamlined project deployments
- Reduced operations and support costs

With our proven assets and extensive experience, we can help drive a smooth transition, while averting complexity and curtailing costs.

Industry-specific cloud solutions

Accenture Cloud Solutions for Oracle combines more than two decades of experience with Oracle solutions, in-depth knowledge of industry-specific needs and an extensive background in cloud initiatives.

We've refined standard processes to a repeatable science to help ensure that each journey to a cloud solution is delivered on schedule and on budget. Accenture has created proven industry and cross-industry Oracle solutions consisting of:

- Accenture Enterprise Solutions for Government
- Accenture Enterprise Solutions for Pensions
- Accenture Federal Cloud Financials
- Accenture Public Service Platform
- Accenture's Life Sciences Cloud
- Accenture Foundation Platform for Oracle—cross industry
- Accenture Run, Design, Build, Upgrade Offering for Oracle ERP—cross industry

The result: an improved ability to reap the benefits of cloud technologies, and to put what we've learned to work for your business.

Offerings for every stage of your project lifecycle

The Accenture Cloud Platform is a part of Accenture's $400 million investment in cloud computing and leverages proven technology to help simplify your cloud implementation.

Accenture covers you from start to finish with a set of offerings spanning strategy to managed services, delivered through public, private and on-premise clouds. Accenture's capability spans a broad range of Oracle technologies, consisting of Oracle E-Business Suite, PeopleSoft, Siebel, Oracle Business Intelligence Suite Enterprise Edition (OBIEE) and Oracle's Fusion Middleware Suite, inclusive of SOA Suite, Webcenter, Identity and Access Management, Oracle Mobile Application Framework and Oracle Database.

Our Accenture Private Cloud for Oracle offering combines cloud with traditional hosting to give clients access to the advantages of both worlds. This hybrid approach was purpose-built based on requirements from our clients who are seeking cloud technologies coupled with the maturity of our hosting and managed services.

Our Oracle Software as a Service (SaaS) practice is delivering Oracle's next generation of ERP, Oracle Cloud applications, Taleo, RightNow and other Oracle SaaS solutions to clients, to help simplify Oracle software implementations.

Deploy applications up to 50 percent faster

Accenture has more than 8,000 cloud projects in 50 countries and more than 40 centers around the world where cloud work is done. With a worldwide reach so expansive, Accenture's deep experience in cloud solutions complements our leadership in Oracle technologies. We are one of the largest of all Oracle service providers, with more than 52,000 Oracle-skilled consultants. Each day we deliver solutions in Oracle's cloud, our own cloud, and on-premise to help increase delivery speeds and to help cost-effectively run clients' services. An IDC MarketScape[1] vendor assessment of the 2013 cloud professional services sector has identified Accenture as a worldwide leader in the field.

We have extensive experience and breadth of coverage in large-scale, complex projects, having worked with more than 60 percent of the Fortune Global 100 on cloud initiatives. Our Global Delivery Network includes more than a dozen "cloud factories," where migrating existing applications or custom building new ones on a cloud platform has become easier. Our experienced consultants can help reduce annual application support and infrastructure operations costs by up to 25-40 percent.

Proven assets that more than 20 years of experience can bring: get work done faster, with less risk

Accenture's reusable assets and accelerators help reduce the complexity of Oracle projects, which can cost-effectively accelerate delivery of your digital transformation.

Pre-configured Oracle cloud environments can jumpstart project development, helping to deploy applications up to 50—75 percent faster than traditional projects. Intended to deliver development environments on "day one" of a project, they are purpose-built for Oracle ERP and Oracle Technology and can help you achieve up to 75 percent reduction in custom development costs.

Accenture also has a well-developed set of accelerators and offerings for Oracle Sales Cloud to help deliver results faster and more cost-effectively.

Proven assets like this help assure you that your new technology will run as expected the day it goes into operation and will scale with you as your needs change.

Accenture: Experience you can count on

You need a well-designed hybrid cloud strategy—one that takes the risk out of the transition and also takes into account your industry requirements. Accenture has the experience and assets to harness these new technologies to help you move forward in your digital journey.

Accenture Cloud Service Models:

Infrastructure as a Service—IaaS
The foundation for hosting Oracle applications and capabilities on a cloud platform, Accenture Private Cloud for Oracle combines cloud with traditional hosting to give our clients access to advantages of both worlds. This hybrid approach was purpose-built based on requirements from our clients who are seeking cloud technologies coupled with the maturity of our hosting and managed services.

Platform as a Service—PaaS
Accenture has developed Oracle-specific cloud platforms that leverage our AFPO technology to package the services needed to build applications—including database, virtualization, and architecture services—thus freeing organizations from the complexities of building and maintaining Oracle application architectures. This can allow developers to focus on business solutions instead of the technical underpinnings. These "jumpstart environments" are integrated, customized and tested to run Oracle software, based upon what really works in enterprise environments.

Software as a Service—SaaS
Accenture service offerings for Oracle Fusion and Oracle Cloud applications provide accelerators, methodologies and trained consultants who have the experience to deliver enterprise solutions in the Oracle Fusion and Cloud environments.
