

Empowering Your Sales Force

It's Not Automation. It's Personal.

Digital is completely reshaping customer engagement. And redefining sales organizations.

Companies Are Investing in Sales Tools and Automation but Return on Investment is Falling Short

80%+

At least 80% use tools to identify new sales leads, generate proposals, and CPQ (configure, price and quote)

...yet the number of sales reps making quota is falling and confidence in achieving targets is low, at 60%¹

60%

Top Sales Objectives

Recent Accenture research² identified a significant gap in sales priorities between Chief Sales Officers (CSOs) and the sales teams on the ground.

CSOs³

58%: Capturing new accounts
45%: Improving sales effectiveness
36%: Increasing penetration in existing accounts

Sales Reps

36%: Improving customer satisfaction
34%: Improving sales effectiveness
31%: Improving team selling

Striving to Improve the Effectiveness of Sales Tools

While sales force tools have evolved, many sales reps see them as a barrier rather than a performance enhancer, and the majority are not fully leveraging their sales tools' capabilities.

Only 13% of sales reps are using the full capabilities of sales tools

● Leveraging all of the tools' capabilities
● Not leveraging any of the tools' capabilities

Only 15% described the sales tools used as being very effective

● Very effective
● Not effective at all

Challenges with Sales Tools

Quantity
59% reported they had to use too many sales tools

Trust
58% felt tools are used more to monitor performance than increase performance

Customization
56% felt tools are not customized to their needs

A new approach is required to enable engaged customer conversations and enhance sales force performance, and ultimately to magnify the sales talent resident within each individual.

Rethinking Sales Tools Through the Lens of Service Design

Accenture believes there are three key dimensions to transforming organizations' approach to tools to put salespeople first and increase adoption:

Engagement Experience

Ideate, design, and architect an interface that amplifies individual sales talent with a simple, intuitive and adaptive experience

Sales Experience Architecture

Data Identification and Prioritization

Identify, prioritize and visualize data that empowers salespeople to personalize the customer selling experience

Personalized Flexible Selling Platforms

Fast to deploy, configurable, multi-device, adaptable, enterprise- and channel-integrated platform

The Payoff

5-10%

Improving sales force performance continues to have a strong value proposition—delivering 5-10 percent in sales/revenue lift⁴.

By rethinking the organization's approach from the needs of the individual sales rep, tools become engaging, which can increase rep productivity and success, which, in turn, helps to drive greater and more efficient revenue generation for the business.
