ACCENTURE REFORMX FOR MUREX

One of the most comprehensive and sophisticated end-to-end change and release management tools for Murex. A vital aid for any Murex development project, Reformx makes managing changes in Murex easy, simple and straightforward, from start to finish.

- Help achieve total visibility over Murex development, avoiding duplication of work
- Enable quality control and reduce manual merge errors
- High quality delivery every time

TIME IS MONEY, AND REFORMX CAN CUT MUREX DEVELOPMENT AND RELEASE CYCLES BY UP TO 20%

Murex is a powerful trading platform, renowned for the breadth of its asset class and functional coverage. Highly customizable, it can be tailored to the precise needs of your business.

In order to get the most out of the platform, and maximize efficiency within the development cycle, it is important that you have a robust development process in place. Keeping track of changes—who did what, when and why—is vital to ensure that nothing gets accidentally overwritten.

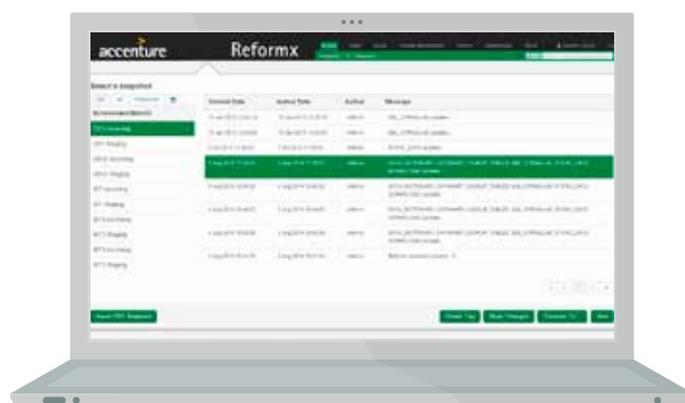

Doing this on a manual basis can prove cost and resource prohibitive. With multiple developers working at once, coordination can naturally become very difficult, increasing the risk of manual mistakes.

Reformx for Murex solves all of this. It is one of the most powerful, comprehensive and sophisticated end-to-end change management tools available for the platform. It provides completely automated version control, and allows users to easily compare environments to quickly spot specific changes and fixes.

The result is total visibility and full audit trails across the entire development and release cycle, from start to finish. Reformx makes configuring Murex as easy, efficient and straightforward as possible for all team members involved, from project and deployment managers through to developers and testers.

The Benefits

- Significant time and cost savings—Reformx can cut Murex development cycles by up to 20 percent
- Reduces the risk of manual errors and delays due to lack of team coordination
- A vital component for the implementation of continuous integration and delivery

ACCENTURE IS THE SOLE GLOBAL ALLIANCE PARTNER OF MUREX

Accenture has worked on Murex projects for over 20 years. This enables us to deliver the highest quality support, release and management configuration services from a variety of locations across the globe, including offshore.

Our Center of Excellence supports multiple live clients and provides training, research and comprehensive development facilities, including the development of Murex-specific tools for environment deployment, configuration management, test automation and results validation.

Reformx for Murex contains great features that provide key potential benefits at each stage of the development and release cycle, allowing all involved to work together more efficiently and cohesively:

Development phase – making changes

- All changes are automatically tracked and logged with detailed information on a line-by-line, developer-by-developer basis, showing who made the change, when and why, creating a full audit trail and version history
- Reformx makes it easy to compare an environment to past dates and other environments side-by-side, with specific changes and fixes highly visible
- Specific changes can be easily searched and browsed by time, type and developer
- Changes can be easily removed and reverted

Packaging changes

- Reformx packages only changes that should be released, and not all other underlying objects
- 'Object view' provides a clear visualization of child/parent object relations
- Changes, groups of changes and different versions can easily be merged
- Where there is conflict between developments, this will be flagged up—no more accidental overrides or lost changes

Deployment/release

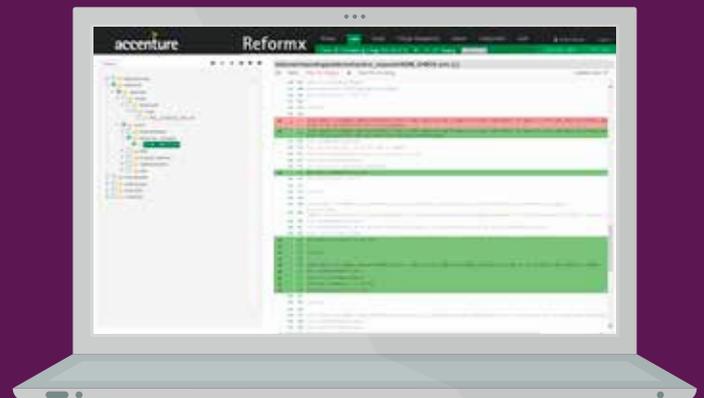

- Reformx enables the grouping of changes for merging and release
- Reformx deploys directly into Murex, saving time

Testing

- Easy to search for fixes and see where they have been deployed
- A vital part of implementing continuous integration and delivery

Additional features

- Fine-grained permissioning system built-in, allowing for total control over who can view and make changes
- Integrates with third-party tracking tools such as JIRA
- All features accessible via easy-to-use web interface
