

ENABLING CLOUD- CONNECTED DIGITAL SERVICES WITH THE ECOSTRUXURE PLATFORM

VIDEO TRANSCRIPT

I am Cyril Perducat, Executive Vice President of IoT and Digital Transformation at Schneider Electric.

Our customers are always challenging us to provide more value to them from the energy and automation solutions we provide.

We are doing this by providing our customers with digital services that connect your equipment and software to the cloud using IoT technology.

We are leveraging big data, analytics, and mobility to provide our customers with actionable information, which can be used to optimize operations and auto parts.

To enable us to do this, we have built an IoT platform called EcoStruxure.io, which serves as a basis for all digital services and provides us the ability to connect, collect, analyze, and close the loop with data coming from not only our own energy and automation devices and software but also from any source through our open, interoperable architecture.

Our platform incorporates industry leading technology from an area of IoT leaders including Microsoft, Cisco, Intel and ISOS.

These partnerships allow us to efficiently and securely provide our customers with the extra value they are demanding and unlock trapped potential of these operations.
