The second element of AI is the next wave where AI will be replacing white collar jobs. Lawyers, accountants, and doctors.

You know, we’re not that far away from being in a position where ninety percent of the diagnostics and the prescription in medicine are going to be coming just as accurately if not more accurately from AI.

What kind of implication is that going to have the workforce where lawyers, accountants, and doctors are being replaced by AI?

That puts, that changes the emphasis of education requirements of what humans are to saying, actually, the thing that fundamentally we will value the most will be creativity.

You know, humans will add creative dynamism, and therefore we need to make sure that the education system and universities are able to develop critical thinkers, creative problem solvers, as well as accountants, engineers, and lawyers.
