CONNECTED DRONES

This, is our world, since it's ours, we can do as we wish with it, we can study it, map it and travel its breadths, we can cultivate it, mine it and harness its power, we can build it and shape it.

5000 years ago we chose to record it.

400 years ago we saw it more closely.

A century ago, we flew right above it, and now, standing on the shoulders of giants we see our next leap, the Accenture connected drone and it's remarkably easy to use.

Step 1 - Mission control, define your mission objectives and launch your drone into the field.

Step 2 - Ingest your capture data into Accenture Digital Distribution Solution and agile and scalable platform. Think of it as uploading holiday photos and videos from your camera's memory card.

Here, you can tag and reference the data and much more.

Step 3 - Teach the algorithms your business rules and using industrialized analytics engines convert raw content and data into information your subject matter experts can act upon, automatically.

This end to end connected drone solution makes industrial drone flight more accessible than ever so you can gain extraordinary insights into your world, be that agriculture, energy, sight inspection or environmental monitoring.

The Accenture connected drone from flight to insight.
