

Accenture Industry X.0 Video Transcript - Internship

- Speaker 1* (Zoran) Speaker 1 (Zoran):
First of all, I chose the internship to learn new technologies and skills, and to meet new people with different mindsets. Secondly, I really appreciated the fact that my teammates were eager to help me if I got stuck with a problem, so the atmosphere was quite cozy.
- Speaker 2* (Imre) The embedded project I was assigned to was better than anything I could have hoped for. Programming robots to do my bidding? Yes please!
And the environment at Accenture is amazing; I think I could live here.
- Speaker 3* (Tudor) Here at Accenture we are committed to driving the new industrial revolution based. We call it Industry X.0. We think that the biggest force behind this change is the young generation of engineers. Therefore, our internship programs allow them to play with latest technologies in our R&D facilities like the Innovation Lab or the Excellence Center.
- Speaker 3* (Bettina) I got the chance to learn new technologies, meet new open-minded and friendly people. I really enjoyed the fact that everyone was very friendly, helpful, willing to give advice and doing their best to make us, interns, feel like we belong in this big team that Accenture has. I always felt at ease, and never once felt uncomfortable.
