

Accenture Industry X.0 Video Transcript

Speaker Hello! I'm Bogdan. I'm a technical lead specialized in Web Development upon .NET Framework.

In the last six years, together with my team, we went through the process of building a new application from scratch: from prototyping, development, testing to having contact with integration and sales teams.

Within our project we are using innovative concepts like Microservices, Aspect-Oriented Programming and Continuous Integration.

What I like at Accenture is that you have the possibility to choose your career path. So, based on the priorities that you set for yourself, you can either choose a Software Architecture direction or a Management direction and your Career Counselor and Team Leader will help you achieve these goals.

My biggest passion is practicing endurance sports on amateur level. This helps me to be more organized and focused on my long-term plans, by setting small and achievable goals.

Within Accenture we've managed to build several groups which have a common hobby like running, swimming, cycling, football, which is also helping me with my passion.

By creating innovative Industry of Things related products, I believe Accenture is a team of professionals which is trying to make the world a better place to live in.
