Application Overview

When shipping product, often expensive multi-use containers are used to ship goods. Monitoring where these containers are, and which ones are available can help a manufacturer better manage shipping costs and anticipate which distributors to follow up with for returns.

The Container Tracking application provides a real-time, SAP-based dashboard to track end-to-end shipments and returns.

Business Value

- Streamlines the process cycle from the receipt of a returned container to its reintroduction to customers.
- Using RFID/barcode technology, allows a site manager to track available containers in real time through a desktop or mobile application based on SAP Fiori.

Features

- Provides real-time container availability statistics.
- Enables mobile integration using the SAP Fiori user experience (UX).
- Uses SAP S/4HANA® integration to enable intuitive interaction with the business process.

Technologies in Use

- SAP Cloud Platform
- SAP S/4HANA®
