nearly $12 million. And looking ahead, we face an exponentially increasing attack surface driven by the IOT, where the rush to market had place security firmly on the back burner. How we approach cybersecurity today will not carry us forward. We need to change the game.

Now here is the good news. You have the power and the tools today to shift the balance. Warren Buffet called cyberattacks the “number one problem with mankind.” His point was that unless we act, we’ll never realize the full potential that our digital world has to offer. To do that, we must engage the cyber enemy in a new way. And that, requires a shift in thinking from our current Cyber Security mind set to a focus on Cyber Resilience. Resiliency is the ability to continuously deliver the intended outcome despite adverse cyber events. Or, as I like to say, “Take and Licking and Keep on Ticking.”

We’d welcome a chance to share more about how we can become Cyber Resilience. You can find more in the Cyber Resilient perspective including the six steps we outline as...
essential to achieving Cyber Resilience. Or shoot me a note at Gus Dot Hunt At AccentureFederal.com (gus.hunt@accenturefederal.com) Thanks for listening and I look forward to working with you to change the game in cyber security and build a cyber resilient future our citizens, family and children deserve.
