How to Supercharge Your apps on Cloud Video Transcript

Speaker: Adam Burden
Accenture Managing Director, Advanced Technology and Architecture

In the early stages, we typically advise companies to think big and start small: moving testing, or development environment, or email to the cloud, while keeping those mission critical systems in-house.

Some companies start small, and then they sit far too long. And honestly, this isn't an option any more; it was fine when we were just experimenting with Cloud.

A lot of the competitors that are out there are not sitting. They are moving their systems and scale and at pace to Cloud.

It doesn't have to be daunting. Start with a clear evaluation of your portfolio and a road map to move forward. You'll find that you can shed a lot of needless weight quickly. You'll probably actually find that Cloud will supercharge your way of doing business.
