Enable transformation with on-premises, managed cloud

The role of technology in healthcare is rapidly changing. As organizations evolve, IT is no longer the cost center it once was, but is increasingly the strategic driver behind transformation. Leveraging a dynamic mix of traditional, cloud, and hybrid technologies is critical if you want to reinvent service delivery focused on patient outcomes, boost efficiencies, reduce costs, and meet expectations.

With patient demand for omnichannel solutions and the need for workload portability to support end-to-end healthcare platforms and payer-provider integration, digitizing your enterprise requires that you consider the response time, availability, scalability, and security requirements of each workload—including government regulations and data privacy. You also need to take into consideration the support challenges of consolidating your existing environment and maintaining it alongside hybrid cloud architectures.

61% of senior healthcare executives say cloud will be a major industry enabler within five years.1

The healthcare industry vertical encompasses the following industries:

• Healthcare payers
• Healthcare providers

Next-generation, consumption-based, as-a-service, private cloud solutions from Accenture and HPE increase service velocity, accelerate time-to-value, and reduce total cost of ownership to improve the patient experience. They also offer seamless integration with both your existing IT ecosystem and Amazon Web Services (AWS) and Microsoft® Azure public clouds.

The healthcare industry vertical encompasses the following industries:

• Healthcare payers
• Healthcare providers

Private Cloud for the Hybrid Cloud solutions deliver:

• Consolidated service outcomes with an on-premises, self-service, secure private cloud—tailored for your business and managed by experts
• Integrated, open, scalable, standards-based infrastructure to enable interoperability and support collaborative business models and integrated payer-provider systems
• Increased service velocity with rapid, automated provisioning using a comprehensive, self-service catalog
• Full reporting and governance with built-in SLA management, metering, and billing
• Seamless integration with AWS and Microsoft Azure for a complete hybrid cloud solution
• Reduced total cost of ownership by shifting CAPEX to OPEX
• Deep understanding and experience in industry verticals
• Accelerated deployment and reduced risk with industry-leading Accenture and HPE services for architecture, deployment, migration, and management
At the same time, becoming a digital organization requires that you transform as quickly and efficiently as you can. That's why Accenture and HPE have joined forces to deliver private cloud solutions as-a-service to help accelerate your transformation.

**Private Cloud for the Hybrid Cloud** solutions are integrated, highly scalable, and automated self-service, managed private clouds. They leverage the expertise of Accenture and HPE to deliver a hybrid cloud, including seamless integration with AWS and Microsoft Azure public clouds, to enable workload portability while retaining full visibility and control of infrastructure, applications, and data.

The consumption-based OPEX model allows you to align IT spend with your healthcare outcomes, while the managed services model allows you to focus on what's most important—while leaving your hybrid cloud operations to the experts.

### 57%

of senior healthcare executives say that cloud is very important for the centralization of health records.1

### 53%

of senior healthcare executives say that cloud is very important for enabling preventative care.2

Your fully integrated, managed private cloud

**Private Cloud for the Hybrid Cloud** solutions meet the demands of the digital enterprise by reducing risk and accelerating service velocity. They allow you to take advantage of public cloud for Dev, Test, and QA environments, and then rapidly move your production workloads to a secure private cloud on premises to meet your business and regulatory requirements.

**Increased agility for data center and application transformation**

With speed-to-market a key requirement for digital healthcare, applications, and data centers often need to be rationalized and transformed to increase efficiencies and reduce costs. Next-gen infrastructures and integrated automation tools need to be deployed to meet agility, scalability, and performance demands. Leveraging the capabilities of HPE’s industry-leading technologies, Private Cloud for the Hybrid Cloud solutions deliver the end-to-end security and protection of patient health information your business, partners, and clients demand.

The solution accelerates service velocity with a self-service catalog and automated resource provisioning. A built-in governance model ensures compliance with business policies and government regulations, while SLA-based run management assures the availability of resources to meet demand.

**Accelerate service innovation with a hybrid cloud environment**

Private Cloud for the Hybrid Cloud solutions seamlessly integrate with AWS and Microsoft Azure public clouds, offering an onramp to cloud and workload portability to ensure the right platform for the workload. It allows you to take advantage of public cloud economics during the entire application lifecycle without compromising data privacy, and ensures that you meet regulatory compliance, including HIPAA.

Accelerate time-to-value, optimize efficiencies, and reduce risk

With just one number to call, Private Cloud for the Hybrid Cloud solutions offer peace of mind—letting you leave the design, deployment, integration, and ongoing management of your private cloud to the experts, so you can focus on improving patient care and delivering consolidated patient outcomes.

We use established, industry-leading tools and methodologies, standardized templates, and advanced technologies to build and run your end-to-end private cloud, seamlessly integrating it into your existing IT ecosystem. Accenture’s top-down approach to migration takes into account the relationship between business processes, applications, servers, and other supporting components, helping to ensure a seamless migration with minimal user impact.

Reduce CAPEX and maximize OPEX with consumption-based pricing

Private Cloud for the Hybrid Cloud solutions offer consumption-based, pay-as-you-go pricing, preserving capital by helping shift infrastructure costs to operational expenses. This as-a-service approach aligns expenditure to usage, and offers the agility you need to easily scale your cloud according to the demands of your business.

Accenture and HPE—accelerating results

For over 25 years, Accenture and HPE have combined unparalleled industry experience and consulting capabilities with industry-leading technology and services to deliver innovative solutions that transform, enable, and protect.

Transform with Private Cloud for the Hybrid Cloud solutions to increase agility, reduce complexity, optimize expenditure, mitigate risk, and improve the patient experience.
