High performance. Delivered.

Early Thoughts on Computers

Interview with Steve Wozniak

Transcript of interview

These computers are going to let us communicate like never before. These computers are going to let us educate in ways we never did. These computers are going to make the little geek like me a hero at work instead of being ignored.

Pretty much the world's gone digital and you don't need that sort of difficult mathematics, you don't need calculus, you don't need any more mathematics than you get by the time you're 10 years old to develop any of the digital stuff. The world's

gone to software really. And software, you know, a lot of people want to be software only, but I like the computer engineering that you just threw out, that concept. 'Cause computer engineering is the person who knows the hardware deep inside and can write software for it, you know and that's where I came from. It's just understanding those low levels; you can take advantage of things better and get a better output, a better job.

You know, you have to have the motivation. You've got to find those engineers and either inspire them or find the ones that just want to somehow be the best in the world, be better than someone else.
